

Practice

Complete

Determine the equivalent state of stress on an element at the same point which represents the principal stress, and the maximum in-plane shear stress and the associated average normal stress. Also, for each case, determine the corresponding orientation of the element with respect to the element shown in the figure below. Suppose that $\tau = 23 \text{ MPa}$. (Figure 1)

Figure

1 of 1

[Review](#)

Part A

Determine the orientation of principal planes of stress.

Express your answers using three significant figures separated by a comma.

Submit [Previous Answers](#)

Correct

Part B

Determine the normal stress $\sigma_{x'}$ that acts on the element with orientation $\theta = -12.4^\circ$.

Express your answer to three significant figures and include the appropriate units.

Problem 9.34

2 of 10

Practice

Complete

(Figure 1)

Figure

Part A

Determine the principal stresses in the cantilevered beam at point A.

Express your answers, separated by a comma, to three significant figures.

$\sigma_1 =, \sigma_2 = 37.8; 10.8$ kPa, MPa

Submit Previous Answers

Correct

Part B

Determine the principal stresses in the cantilevered beam at point B.

Express your answers, separated by a comma, to three significant figures.

$\sigma_1 =, \sigma_2 = 42.0; 10.6$ MPa, kPa

Problem 9.52

3 of 10

Practice

Complete

Complete

In (Figure 1), $\sigma_y = 11.8$ ksi.

Figure

Part A

Determine the principal stresses. Specify the orientation of the element.

Express your answers, separated by commas, to three significant figures.

$\sigma_1 =, \sigma_2 =, \theta_{p1} = 14.7; 22.9; 73.9$ ksi, ksi, ° (clockwise)

Submit Previous Answers

Correct

Part B

Determine the maximum in-plane shear stress and average normal stress. Specify the orientation of the element.

Express your answers, separated by commas, to three significant figures.

$\tau_{\max} =, \sigma_{\text{avg}} =, \theta_s = 18.8; 41.0; 28.9$ ksi, ksi, ° (clockwise)

Problem 9.59

5 of 10

Practice

Complete

(Figure 1)

Review

Part A

Determine the principal stresses. Specify the orientation of the element.

Express your answers, separated by commas, to three significant figures.

$$\sigma_1 =, \sigma_2 =, \theta_p = 227, -177, -14.9 \text{ MPa, MPa, }^\circ$$

Submit Previous Answers

Correct

Part B

Determine the maximum in-plane shear stress and average normal stress. Specify the orientation of the element.

Express your answers, separated by commas, to three significant figures.

$$\tau_{\max \text{ in-plane}} =, \sigma_{\text{avg}} =, \theta_s = 202, 250, 30.1 \text{ MPa, MPa, }^\circ$$

Problem 9.65

7 of 10

Practice

Complete

The thin-walled pipe has an inner diameter of 0.5 in and a thickness of 0.025 in.

Review

Part A

If it is subjected to an internal pressure of 439 psi and the axial tension and torsional loadings shown, determine the principal stress at a point on the surface of the pipe. (Figure 1)

Enter your answers numerically separated by a comma.

$$\sigma_1, \sigma_2 = 28.9, -17.5 \text{ ksi}$$
