RSC Part I: Introduction

- ❑ **Circuit switching vs packet switching**
- ❑ **Protocols and protocols stacks**
- ❑ What is the Internet
- ❑ Network structure
- ❑ ISPs and Internet

The Network Core

- mesh of interconnected routers
- **the fundamental question:** how is data transferred through net?
 - ❖ **circuit switching:** dedicated circuit per call: telephone net
 - ❖ **packet-switching:** data sent through net in discrete "chunks"

Introduction 1-3

Network Core: Circuit Switching

- End-end resources reserved for "call"**
- link bandwidth, switch capacity
 - dedicated resources: no sharing
 - circuit-like

Cartagena99

Network Core: Circuit Switching

network resources
(e.g., bandwidth)

divided into "pieces"

- pieces allocated to calls
- resource piece *idle* if not used by owning call (*no sharing*)

□ dividing link bandwidth into "pieces"

- ❖ frequency division
- ❖ time division

Circuit Switching: FDM and TDM

FDM

Example:

4 users

TDM

CALL OR WHATSAPP:689 45 44 70

Cartagena99

Network Core: Packet Switching

each end-end data stream
divided into *packets*

- user A, B packets *share* network resources
- each packet uses full link bandwidth
- resources used *as needed*

Bandwidth division into "pieces"
Dedicated allocation
Resource reservation

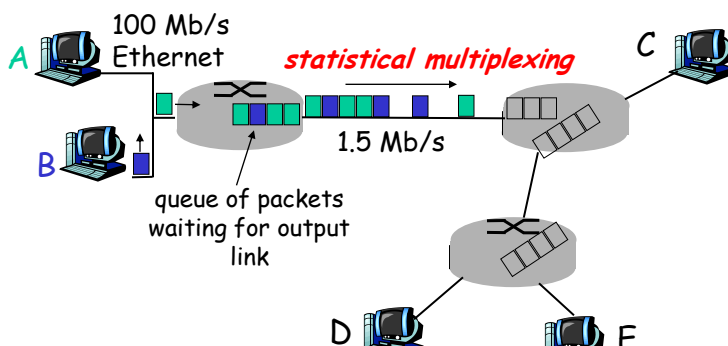

resource contention:

- aggregate resource demand can exceed amount available
- congestion: packets queue, wait for link use
- store and forward: packets move one hop at a time
 - ❖ Node receives complete packet before forwarding

Introduction 1-7

Packet Switching: Statistical Multiplexing

Packet-switching: store-and-forward

- ❑ takes L/R seconds to transmit (push out) packet of L bits on to link at R bps
- ❑ *store and forward*: entire packet must arrive at router before it can be transmitted on next link
- ❑ delay = $3L/R$ (assuming zero propagation delay)

Example:

- ❑ $L = 7.5$ Mbits
- ❑ $R = 1.5$ Mbps
- ❑ transmission delay = 15 sec

} more complex than this ...

Packet switching versus circuit switching

Packet switching allows more users to use network!

- ❑ 1 Mb/s link
- ❑ each user:
 - ❖ 100 kb/s when "active"
 - ❖ active 10% of time

- ❑ *circuit-switching*:

• 10 users

Cartagena99

Packet switching versus circuit switching

Is packet switching a "slam dunk winner?"

- ❑ great for bursty data
 - ❖ resource sharing
 - ❖ simpler, no call setup
- ❑ **excessive congestion:** packet delay and loss
 - ❖ protocols needed for reliable data transfer, congestion control
- ❑ **Q: How to provide circuit-like behavior?**
 - ❖ bandwidth guarantees needed for audio/video apps
 - ❖ still an unsolved problem

Introduction 1-11

What's a protocol?

human protocols:

- ❑ "what's the time?"
- ❑ "I have a question"
- ❑ introductions

... specific msgs sent

... specific actions taken
when msgs received

network protocols:

- ❑ machines rather than humans
- ❑ all communication activity in Internet governed by protocols

*protocols define format,
order of msgs sent and*

Protocol "Layers"

Networks are complex!

- many "pieces":
 - ❖ hosts
 - ❖ routers
 - ❖ links of various media
 - ❖ applications
 - ❖ protocols
 - ❖ hardware, software

Question:

Is there any hope of
organizing structure of
network?

Or at least our discussion
of networks?

Why layering?

Dealing with complex systems:

- explicit structure allows identification, relationship of complex system's pieces
 - ❖ layered **reference model** for discussion
- modularization eases maintenance, updating of system
 - ❖ change of implementation of layer's service transparent to rest of system

Cartagena99

Internet protocol stack

- ❑ **application:** supporting network applications
 - ❖ FTP, SMTP, HTTP
- ❑ **transport:** process-process data transfer
 - ❖ TCP, UDP
- ❑ **network:** routing of datagrams from source to destination
 - ❖ IP, routing protocols
- ❑ **link:** data transfer between neighboring network elements
 - ❖ PPP, Ethernet
- ❑ **physical:** bits "on the wire"

Introduction 1-15

ISO/OSI reference model

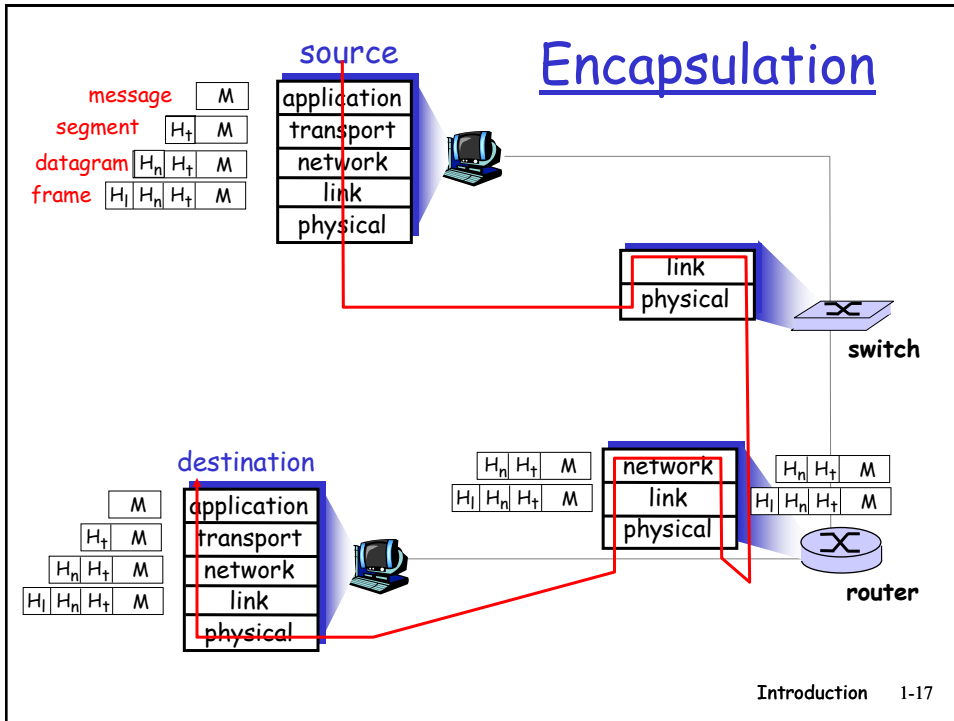

- ❑ **presentation:** allow applications to interpret meaning of data, e.g., encryption, compression, machine-specific conventions
- ❑ **session:** synchronization, checkpointing, recovery of data exchange
- ❑ Internet stack "missing" these
